

Time is running out for Montclair's mature trees

Plant a tree. Today. Why? Montclair's tree population is aging. And older trees are vulnerable to disease and storm damage. Your trees continue to add 10-20% to the overall valuation of your home.

Preserve a Montclair tradition. Two generations ago, Montclair residents planted trees on private property to enhance aesthetic value and to get protection from summer heat. Many of these trees have reached peak maturity. Public planting is not enough to replenish the tree population, so the community needs your help.

Protect indigenous trees. Native trees are an important habitat for local insect and bird species, and help foster sustainable living by providing cleaner air, reducing cooling costs and preventing water run off.

For more information about native shade trees and who can plant it for you, visit:
